**\*\*Main branch**

Two other branches on my attempts for the RecyclerView and TabView.

Objective 1 : Have the code implemented and fully functional 

Objective 2 : Make an interface improvement

A screenshot of a mobile application interface. At the top, there is a title "Enter Product Name and Quantity". Below the title are two input fields: "Product Name" and "Quantity". Under the "Product Name" field is a purple button labeled "Save Product". Below the "Quantity" field are two buttons: a purple button labeled "Retrieve Product List" and a red button labeled "Clear List". The bottom half of the screen is a large, empty white rectangular area, likely intended for a list of products. The entire interface is set against a dark blue background.

Objective 3 : Add additional functionality in the form of at least 1 additional query

```

@Dao aavery0506, 3/9/25, 12:13 PM • Initial commit
public interface ProductDao {

    1 usage 1 implementation
    @Insert
    void insertProduct(Product product);

    no usages 1 implementation
    @Query("SELECT * FROM products WHERE productName = :name") //SQLite statement/command
    List<Product> findProduct(String name); //Java

    no usages 1 implementation
    @Query("DELETE FROM products WHERE productName = :name")
    void deleteProduct(String name);

    no usages 1 implementation
    @Query("DELETE FROM products")
    void deleteAllProducts();

    1 usage 1 implementation
    @Query("SELECT * FROM products")
    List<Product> getAllProducts();
}

```

Objective 4 : Improve the output by placing it into a nicer layout structure. Bonus points if you put it in a recycler view or find a way to incorporate a tab layout.

Submission:

Reflections:

This lab seemed very straightforward at first. I understand setting up the database and getting it to work with output in a text view. I did struggle trying to incorporate different types of Layouts. I attempted both a RecyclerView and a TabLayout without success. I think given more time I can figure out what the missing link is for the RecyclerView. I do think that I need more practice implementing this with data changes. The original assignment incorporating a recycler view did not incorporate sending data to update the recycler view which is where I am struggling.

Testing:

There has been A LOT of testing different ways to try and link the RecyclerView to the database. I have met with Dr. G and Ryan who also did not know how to get it to work.

Dr.G is creating a video for how to make this work for me.

Extensions:

Due to time constraints I was not able to implement any extensions on this assignment.

|                                                            | Possible | Given |
|------------------------------------------------------------|----------|-------|
| Layout                                                     |          |       |
| Objective 1                                                | 10       | 0     |
| Objective 2                                                | 10       | 0     |
| Objective 3                                                | 30       | 0     |
| Objective 4                                                | 30       | 0     |
| Misc                                                       |          |       |
| Code Quality                                               | 10       | 0     |
| Not included in total possible:                            |          |       |
| Does not compile                                           | -100     | 0     |
| Extensions (Not calculated without report)                 | 10       | 0     |
| Creative or went above and beyond                          | 10       | 0     |
| Code contains warnings                                     | -20      | 0     |
| Student worked around requirements or ignored instructions | -100     | 0     |
|                                                            |          |       |
| TOTAL POINTS POSSIBLE out of 100                           | 90       | 0     |
